SUMMARY

Applied ML/GenAI Engineer building production-grade **agentic AI systems** – **RAG** pipelines, **MCP**-based **tool orchestration**, and **LLM observability**. Shipped a **multi-agent** GitHub reviewer (318 tests) and a code-governance platform with sub-15-second review latency. CS undergraduate at MAIT (2027), currently a **GenAI Intern** at NIIT Limited. Stack: **Python**, **Scikit-learn**, **TensorFlow**, **LangChain**, **FastAPI**.

EDUCATION

Maharaja Agrasen Institute of Technology

B.Tech, Computer Science and Technology

New Delhi, India

Aug 2023 – 2027

- Relevant Coursework: Data Structures and Algorithms, DBMS, OOP, Operating Systems, Machine Learning

SKILLS

ML Foundations: Python, Java, C++, SQL, Pandas, NumPy, Scikit-learn, TensorFlow

GenAI & Agentic Systems: LangChain, RAG, MCP, AI Agents, Prompt Engineering, Google Gemini, Mistral AI, Embeddings, MMR Retrieval, Hugging Face

Backend, APIs & Data: FastAPI, Flask, REST APIs, Pydantic, MCP SDK, ChromaDB, MySQL, GitPython, Python AST

Observability & Tools: Langfuse, Git, GitHub, Vercel, Streamlit, Jupyter/Colab

EXPERIENCE

GenAI Intern

NIIT Limited

Jun 2026 – Aug 2026

New Delhi, India

- Shipped 2 independent **GenAI applications** end-to-end using **Flask**, **FastAPI**, **REST APIs**, **Pydantic** schemas, and **ChromaDB**, following production-grade project structure and **version-control** practices.
- Applied **RAG pipelines**, **prompt engineering**, and **agentic architecture** design across **LangChain**, **MCP**, and **Google Gemini** to production workflows through self-directed learning.
- Researched and integrated Google's **Agent-to-UI (A2UI)** protocol into an agentic workflow, combining **MCP** tool interoperability, **AST**-based static analysis, and structured JSON UI rendering.

PROJECTS

AI GitHub Agent | *Python, FastAPI, React, Google Gemini, RAG, MCP, Pydantic, AST*

GitHub | Demo

- Built a semi-autonomous **multi-agent system (Planner-Executor-Validator)** with controlled **tool invocation** and **state management**, validating code changes in a sandbox before drafting PRs for human review.
- Architected a two-track system: an offline pipeline (**AST** parsing, metadata extraction, **vector embeddings**) and an online **FastAPI** service with **Pydantic** schema validation and a **React** frontend.
- Implemented **RAG**-based semantic retrieval over any GitHub repository using **Google Gemini** embeddings; exposed agent tools via **MCP** and validated the system with a 318-test automated suite.

AI Engineering Review Platform | *Python, Flask, MCP SDK, Google Gemini, Langfuse, AST*

GitHub | Demo

- Built a deterministic code-governance platform via an **MCP** client-server architecture, enforcing 12 automated **evaluation** checks across Metrics, Complexity, Security, and Maintainability.
- Designed a config-driven **Company Rule Engine** (6+ **YAML** policies) so review verdicts update from configuration edits alone, decoupling policy changes from code deployment.
- Used **Google Gemini** as a reasoning layer to explain and prioritize deterministic findings, returning a full review in under 15 seconds per run.
- Integrated **Langfuse** for end-to-end **LLM observability** – tracing input, output, corrected output, metadata, and root-cause backend errors per run, with trace latency capped at 15 seconds.

LEADERSHIP & ACHIEVEMENTS

Executive Head, Event Management

CSI College Society, MAIT

2023 – Present

New Delhi, India

- Orchestrated 5 large-scale technical events, including a Microsoft Hackathon; managed 30 volunteers across 4 departments with a budget exceeding Rs. 1 Lakh.
- Solved 150+ DSA problems across 22 core patterns (arrays, graphs, DP, trees, sliding window).
- Received a written appreciation letter from the HOD, MAIT, for organizing the Microsoft Hackathon.
