SUMMARY

Data Analyst / Business Analyst skilled in **SQL**, **Python**, and **Exploratory Data Analysis (EDA)**, with hands-on experience turning raw data into actionable, **data-driven insights** through **dashboarding** and **business intelligence (BI)** reporting. Computer Science undergraduate at MAIT (graduating 2027) with recent experience as a Data/GenAI Intern at NIIT Limited, shipping **data-driven** applications end-to-end.

EDUCATION

Maharaja Agrasen Institute of Technology, New Delhi, India

B.Tech, Computer Science and Technology

Relevant Coursework: Data Structures & Algorithms, DBMS, Statistics, Machine Learning, OOP, Operating Systems

Oxford Senior Secondary School, New Delhi, India

Senior Secondary, Science Stream

SKILLS

Data Analytics & Statistics: Python, SQL, Pandas, NumPy, Scikit-learn, Exploratory Data Analysis (EDA), Statistical Analysis, Hypothesis Testing, Data Cleaning, Data Wrangling, Data Validation, Trend Analysis, Data-Driven Decision Making

Data Visualization & Business Intelligence (BI): Matplotlib, Seaborn, Dashboarding, KPI Reporting, Structured (JSON) Reporting, Data Storytelling

Machine Learning & Modeling: Supervised & Unsupervised Learning, Predictive Modeling, Model Evaluation, Feature Engineering

Databases & Backend: SQL, ChromaDB (Vector DB), Flask, FastAPI, REST APIs, Pydantic

Tools & Platforms: Git, GitHub, Jupyter Notebook, Google Colab, VS Code, Streamlit

EXPERIENCE

GenAI Intern, NIIT Limited

New Delhi, India

- Analyzed structured and unstructured data requirements to design and ship 2 end-to-end applications using **Python**, Flask, FastAPI, and Pydantic schemas, following production-grade data-handling and version-control practices.
- Applied **data validation**, **feature engineering**, and retrieval techniques to convert raw data into structured, queryable formats using ChromaDB, improving downstream data usability.
- Researched and integrated Google's Agent-to-UI (A2UI) protocol, combining structured data parsing (AST-based static analysis) with JSON-based data reporting and rendering.

PROJECTS

AI GitHub Agent

[GitHub](#) | [Demo](#)

Python, FastAPI, SQL-based Retrieval, Pandas

- Built a data pipeline (AST-based parsing, metadata extraction, vector embeddings) that analyzes code repositories and surfaces structured, actionable insights.
- Designed a **Python**/FastAPI backend with Pydantic-validated data schemas to process and serve structured analysis results to a React dashboard.
- Implemented semantic search and retrieval over large repository datasets using embeddings; validated data quality and reliability with 318 automated tests.

AI Engineering Review Platform

[GitHub](#) | [Demo](#)

Python, Flask, Data Reporting, YAML

- Built a **data-driven** reporting platform running 12 automated checks across 4 categories (Metrics, Complexity, Security, Maintainability), surfacing quantified findings from codebase data.
- Designed a configurable rule engine (6+ YAML-based policies) enabling flexible, **data-driven** analysis that updates with configuration changes, not code changes.
- Delivered analysis results as structured, typed JSON reports in under 15 seconds per run, with full observability and error-tracing via Langfuse.

LEADERSHIP

Executive Head, Event Management — CSI College Society, MAIT

- Managed and tracked budgets exceeding Rs. 1 Lakh across 5 large-scale events (incl. a Microsoft Hackathon), coordinating resource allocation for 30 volunteers across 4 departments and delivering all milestones on time.
- Analyzed outreach performance across 3 communication channels and redesigned engagement strategy, driving a 40% increase in attendance (120 → 170 participants) within one academic year.

ACHIEVEMENTS

- Solved 150+ data structure & algorithm problems across 22 core patterns (arrays, graphs, DP, trees, sliding window) through structured, analytical problem-solving practice.
- Received a written appreciation letter from the HOD, MAIT, for organizing the Microsoft Hackathon under CSI College Society.
