SUMMARY

CS undergraduate and GenAI Intern with hands-on experience across the AI/ML stack — LLM integration, RAG pipelines, prompt engineering, and embeddings — built through independent agentic AI projects. Strong Python fundamentals with working ML/DL knowledge (PyTorch), backed by a deterministic-tool-plus-LLM-reasoning architecture used in production-style projects.

EDUCATION

Maharaja Agrasen Institute of Technology <i>B.Tech, Computer Science and Technology</i> Coursework: Data Structures and Algorithms, DBMS, OOP, Operating Systems, Machine Learning	New Delhi, India Aug 2023 – 2027
Oxford Senior Secondary School <i>Senior Secondary, Science Stream</i>	New Delhi, India 2023

EXPERIENCE

NIIT Limited <i>GenAI Intern</i> - Completed a structured Generative AI program covering LLM integration, RAG pipelines, prompt engineering, embeddings, and AI Agent architectures using Python and Google Gemini. - Built independent GenAI applications end-to-end using Flask, FastAPI, and pydantic schemas, integrating LLM reasoning with structured, deterministic data pipelines. - Worked with vector embeddings and ChromaDB for semantic retrieval, and explored AST-based static analysis for automated document validation workflows.	New Delhi, India June 2026 – Present
CSI College Society, MAIT <i>Executive Head, Event Management</i> - Orchestrated 5 large-scale technical events including a Microsoft Hackathon, coordinating 30 volunteers across 4 departments with a budget exceeding Rs. 1 Lakh, delivering all milestones on time. - Redesigned outreach across 3 communication channels, growing event attendance by 40 percent (120 to 170 participants) within one academic year through targeted engagement strategies. - Received a written appreciation letter from the HOD, MAIT, recognizing positive impact on project performance and team delivery.	New Delhi, India 2023 – Present

PROJECTS

AI GitHub Agent <i>Python, FastAPI, pydantic, RAG, MCP, GitPython, Embeddings, AST</i> - Designed an AI Agent for GitHub repositories with a Planner, Executor, and Validator pipeline that plans code changes, validates outputs, and opens draft pull requests automatically. - Built a two-track architecture combining offline embeddings and AST-based static analysis with an online REST API pipeline using FastAPI and pydantic schema validation. - Implemented RAG-based semantic retrieval across repositories using vector embeddings and exposed core tools through the Model Context Protocol for agent interoperability.	Ongoing
AI Engineering Review Platform <i>Python, Flask, MCP SDK, Google Gemini, AST</i> - Built an MCP-first automation platform where Flask acts as an MCP client to a Python MCP server exposing 12 deterministic analysis tools across Metrics, Complexity, Security, and Maintainability — applicable to document validation pipelines. - Implemented a config-driven Rule Engine using YAML policies (function length, forbidden calls, docstring coverage) so verdicts update reliably from config edits, supporting compliance-style validation workflows. - Used Google Gemini as the reasoning layer to explain and prioritize deterministic findings, returning a complete review in under 30 seconds per run.	Ongoing

ACHIEVEMENTS

Solved 150+ DSA problems across 22 core patterns (arrays, graphs, DP, trees, sliding window) as part of structured placement preparation.
Received a written appreciation letter from the HOD, MAIT for organizing the Microsoft Hackathon under CSI College Society.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, C, SQL
Machine Learning & Deep Learning: ML Algorithms, Deep Learning, CNNs, RNNs, Transformers, PyTorch
GenAI and LLMs: LangChain, RAG, MCP, AI Agents, Prompt Engineering, LLM Fine-Tuning, Gemini, Mistral AI, Embeddings
Backend, APIs and Data: Flask, FastAPI, REST APIs, pydantic, MCP SDK, GitPython, Python AST, ChromaDB, Pandas, NumPy
Tools and Platforms: Git, GitHub, Streamlit, VS Code, Jupyter Notebook, Google Colab, Matplotlib, Seaborn
